PRESS RELEASE

Series 8 – MP 8 – Don't underestimate the little ones

Compact separate modules with unique technological features

Herford, Dezember, 21th 2017: The Series 8 is uncompromising, ultimate and totally High-End. The new MP 8 High End Multi Source Player completes the Series 8. In combination with the DAC 8 DSD, one of the world's finest digital / analogue converters, and the AMP 8, an audiophile power amplifier offering absolutely peerless sound quality, it forms a comprehensive High-End system offering extremely high performance, despite being amazingly small and compact.

The MP 8 is based on our R-series MP 2000 R MKII, and is best described as a digital multi-talent.

The MP 8 looks small and inconspicuous. At first glance the casual observer may think it is just a classic CD player, but its true capabilities extend far beyond this. Our multi-source player houses a first-class CD mechanism; a high-performance digital tuner offering FM, FM-HD and DAB+ reproduction; a high-quality Bluetooth streaming module for receiving music from mobile devices, a streaming client with Internet radio and music services for connection to the home network via LAN and WLAN, USB Master Mode and HD streaming plus a digital connecting board with inputs for external sources (two USB device mode and three HD-S/P-DIF). The wide range of connections allows external equipment to exploit the machine's superb signal processing to the full.

The MP 8 is not a computer; it is a high-end audio device incorporating many supplementary functions designed to ensure that all modern digital sources can be used, reproduced and processed to a D/A converter in the highest possible quality. The MP 8 can provide any converter with high-quality audio data (up to 192 kHz) via its S/P-DIF output, but the perfect match is our DAC 8 DSD. The SYS OUT and DAC 8 LINK outputs are used to exchange control data and transmit audio signals with optimal routing to the DAC 8 DSD. When using the T + A App, the entire Series 8 system is controlled via the MP 8.

The MP 8 delivers a stunning experience in sound reproduction, and finally exploits the full potential of digital music sources. The MP 8 is now available from specialist dealers.
