

Rearspeaker - PULSAR TAB 621E

■ Specifications

The TAB 621 E is the ideal rear speaker for surround systems, and is specially designed for "difficult" situations where there is no space for classic stereo speakers. Indeed, the TAB 621 E is highly non-classical in its specification: a 17 cm bass driver and two 60 mm cone high-frequency units. The high-frequency drivers are installed at the top of the TAB cabinet, where they radiate sound in opposition to each other, angled upward. The sound is then reflected from the ceiling and side walls, with the effect that the listener is no longer aware of the location of the speakers themselves. The result is an extremely impressive representation of surround and depth effects.
