PRESS RELEASE

The new Pulsar ST 21 floor-standing loudspeakers - Design meets function

T+A renews the Pulsar loudspeaker series

Herford, 9th May 2019: The Pulsar ST 21 is an extremely slim, compact floor-standing loudspeaker which combines outstanding acoustic qualities with sleek appearance. They were developed from scratch and are equipped with the latest high-performance chassis. The high-quality finish with matt lacquered surfaces match perfectly into any modern living space. The Pulsar loudspeaker series is the entry into T+A's audiophile loudspeaker range.

The Pulsar ST 21 are equipped a complex three-way system, based on two long-throw bass units, a wide band mid-range and a High-End dome tweeter. Thus, the new Pulsar loudspeakers have the ability to radiate low bass cleanly and at high pressure, at the same time reproducing an open, uncoloured treble / mid-range with great vitality. All speaker cones are produced from aluminium of various thicknesses using specially calculated embossing tools, ensuring that they are very stiff and strong, but still light in weight. The drive unit magnets are extremely powerful, while the magnet and suspension systems are of highly sophisticated design, and made from the finest materials available. As a result, these High-End drivers are capable of generating tremendous levels as well as being amazingly dynamic and fast.

The T+A Pulsar ST 21 are the ideal loudspeakers for all music and design lovers. Compact, elegant and excellent sounding. Noble processing down to the smallest detail and modern design combined with outstanding acoustic characteristics are the essential characteristics of this series.
