PRESS RELEASE

Series 8 – B 8 –High-End is not necessarily large and bulky

New T+A bookshelf monitor satisfies the most exacting audiophile demands

Herford, January, 16th 2019: The new B 8 bookshelf speaker is the ideal monitor for the AMP 8 high-end power amplifier, and showcases the audiophile characteristics of the Series 8 perfectly. The B 8 is uncompromising and totally High-End. Its cabinet is made of aluminium with a hand-brushed, anodised finish which perfectly matches the look of the Series 8 components.

The cabinets consist of profiled aluminium extrusions, and the sophisticated cabinet design combines refined appearance with enormous strength and rigidity. Special absorbent material is used to damp the cabinet walls, effectively preventing the speaker cabinet from adding to the sound with unwanted resonance effects. The high-end drive units employed are based on the technology of the Criterion speakers. The 20 mm fabric dome tweeter and 150 mm high-end bass unit harmonise perfectly, and in conjunction with the precisely calculated crossover produce extremely homogeneous dispersion behaviour with an authentically spacious sound and accurate imaging.

The Series 8 is the most convincing proof that even small, compact components are capable of satisfying the most exacting audiophile demands. Although only 19 cm wide and just 30 cm tall, the B 8 gives you the same experience as when listening to substantially larger loudspeakers. The sound image is characterised by its clarity, total lack of colouration, openness and impressively deep bass.

The shelf monitor B 8 is available from February 2019 from specialist dealers.
