PRESS RELEASE

The new MP 2500 R – A Player of high calibre

New Multi Source SACD-Player completes the R series

Herford, May, 12th 2017: The MP 2500 R is the newest and most sophisticated Multi Source Player and PCM / DSD DAC in the R-Series. It has the same overall design philosophy and technical facilities like the smaller MP 2000 R MKII player. Both have been developed to reproduce high-res audio files without any trace of compromise. Instead of a CD mechanism we have equipped the MP 2500 R with the SACD drive from the T+A High-End SACD player MP 3100 HV which is a completely new development.

The modern SACD mechanism incorporating the latest decoder technology, offering very short access times and outstanding error correction. It is capable of reading CD (PCM 44.1 kSps) and SACD (DSD 64 2.8 MHz) discs at the highest possible quality. As in the MP 2000 R MKII, PCM data is converted using the outstanding T+A double differential quadruple converter with all its sophisticated digital signal processing. DSD data are handled by the unique analogue T+A true 1-bit DSD converter from the PDP 3000 HV, which processes the DSD data in native form as a bitstream rather than converting them. This makes it possible to reproduce DSD data up to DSD 512, as delivered by the USB input of the digital connecting board, to the highest level of quality.

The machine's streaming client takes the form of the new T+A high-res streaming board, which provides maximum resolution as well as the facility to access various music services, Internet radio, inclusion in the home network via LAN and WLAN, USB Master Mode and HD streaming from network servers. The digital tuner offers FM, FM-HD and DAB+ capability, and delivers excellent sound. The MP 2500 R also includes a high-quality Bluetooth streaming module for transferring music from mobile devices.

The machine is controlled using the FM1000 infrared remote control handset, or - ideally - the T+A Control App. The App is capable of controlling every element of every function of our machines. Not only does it display the information pertaining to the streaming client, but also the screen content of all sources, such as the station name and radio text when used in FM radio mode.

The MP 2500 R is available from T+A authorized distribution partners and specialist dealers.
