

Sattelitespeaker - PULSAR TAR 200

The TAR 200 E is our smallest Hi-Fi speaker. Although very small, it offers a well-balanced sound image with considerable bass. The secret to this performance is its aluminium cabinet, which is a high-strength pressure casting. This construction means that the effective internal volume is very large relative to its outside dimensions. This little speaker is ideal for adding sound to small rooms, balconies, bathrooms and similar sites. Accessories include a highly practical mounting bar, making the speaker easy to attach to a wall. Used in conjunction with a sub-woofer, the TAR 200 E effortlessly produces a sound stage comparable to that of large loudspeakers.

Specifications
